V	Household Questionnaire and Trip Diary	58,

The Ontario Ministry of Tourism and Recreation commissioned this study in order to determine the travel habits and characteristics of Ontario residents travelling within the province. Travel by non-residents of Ontario is excluded. This information will be of assistance for the preparation of both marketing and development programs for this Travel Association Area in addition to general economic planning.

Travel data for this regional profile cover the following: origin of travellers, length of stay, seasonality, purpose of trip, accommodation used, activity participation, distance travelled, mode of transportation, expenditures, and socio-economic characteristics.

This calendar year 1982 study, which was conducted by Canadian Facts, involved about 4,300 households each maintaining a travel diary for a two month period. Each qualifying trip taken by a member of the household was recorded in detail. Full details on survey methodology are contained in the Technical Appendix.

For any further queries in regards to the methodology employed or to this publication, please contact:

ONTARIO EAST

(a) Visitation

There was a total of 10,288 million travellers to this Travel Association Area, or about 12 per cent of the total number of travellers in Ontario. Approximately 75 per cent originated in Ontario East.

Ontario East received about 13 per cent of all resident same day person-trips to the province, and about 11 per cent of all overnight person-visits.

About two thirds of travellers to the region are on same day trips and one third stay overnight. The same day trips are fairly evenly distributed across seasons with a slight concentration in the first quarter. The highest incidence of overnight trips (37 per cent) is in the summer quarter.

Visiting friends or relatives is the main trip purpose mentioned by a majority (50 per cent) of overnight visitors to this region. Recreation/pleasure is mentioned second most often (32 per cent). Proportionately more same day trips are taken in the region for personal business and shopping purposes than for the province as a whole.

Within the region, non-commercial accommodation is used for about 76 per cent of person-nights. Campgrounds or trailer parks are the most often used form of commercial accommodation (10 per cent).

Shopping and participation in outdoor or sporting activities are the two most common activities mentioned for the region.

About nine out of ten same day trips to the region come from within one hundred miles. Four out of ten overnight trips come from a distance exceeding 200 miles.

(b) Expenditure

A total expenditure of $651 million was made in this area, or about 16 per cent of the total expenditure within Ontario. Residents of Ontario East generate the largest expenditure ($415.8 million) in the region.

The average expenditure in the region is $63.28 per person-trip, representing the highest average expenditure of all regions. The average for the province in general is $48.18. The high average is mainly a function of the very high average expenditures generated by residents travelling to Ontario East from the more distant regions.

The largest expenditure category in this area was $156.2 million on automobile, or about 24 per cent of the total amount spent in the region.

(c) Socioeconomic Characteristics of Overnight Travellers

Comparing overnight visitors to the region, with visitors to the province, it can be seen that the region has a more mature visitor profile.

About 50 per cent of overnight visitors to the region have attained post-secondary education, which is a somewhat higher proportion than for Ontario as a whole.

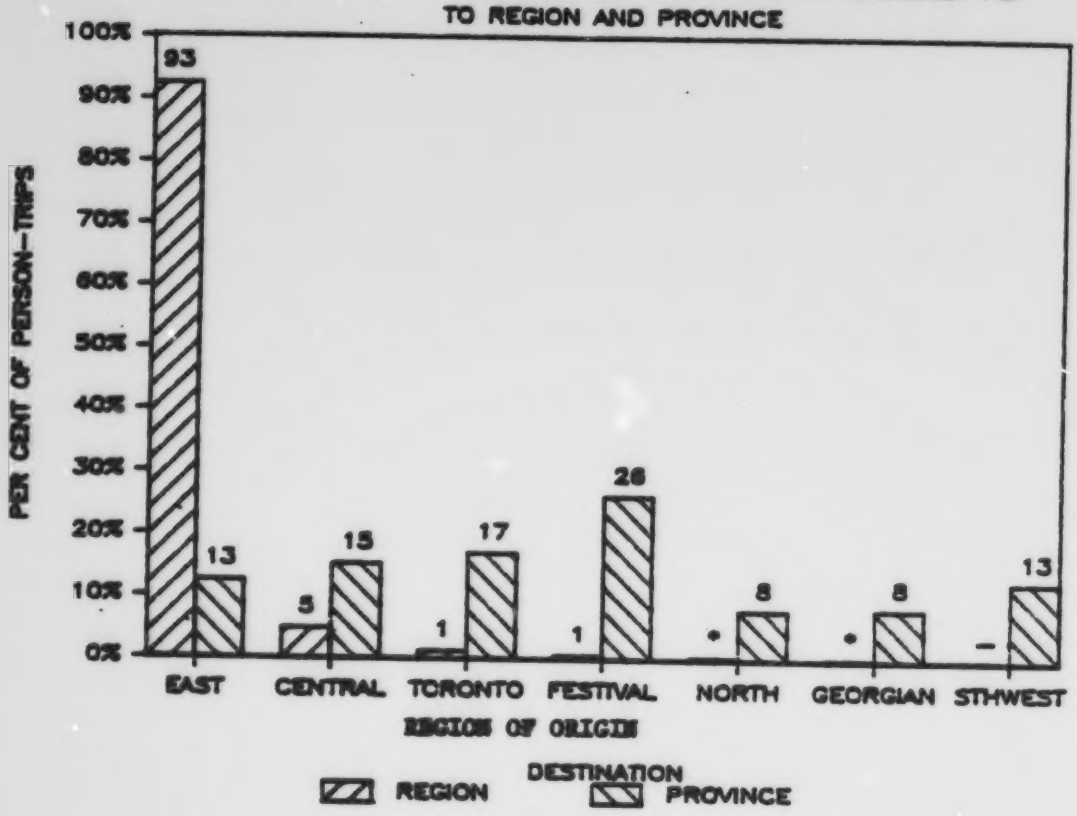
Two-thirds of overnight visitors to the region come from households where the chief wage earner is a professional/business person or a skilled labourer.

Approximately 60 per cent of overnight person-visits to the region are from households having an income of $24,000 or more.

DETAILED FINDINGS

ORIGIN OF SAMEDAY TRAVELLERS

TO REGION AND PROVINCE



* Less than 0.5%

TRIP CHARACTERISTICS

(i) Same Day Travel By Origin Region

Origin	Destination: Region #	Region %	Province #	Province %
Ontario East	6,266	92.5	6,742	12.6
Central Ontario	330	4.9	8,162	15.3
Metro Toronto	88	1.3	9,082	17.0
Festival Country	47	0.7	14,035	26.3
Ontario North	26	0.4	4,230	7.9
Georgian Lakelands	14	0.2	4,375	8.2
Southwestern	-	-	6,797	12.7
Total (Base: Person-Trips ('000)) (1)	6,771	100.0	53,423	100.0
Average Party Size Per Trip:	1.75		1.88	

Ontario East was the destination for 6.771 million same day person-trips or 13 per cent of total same day visitors within the province (2). This is the fifth largest share of the same day market (out of a total of seven regions).

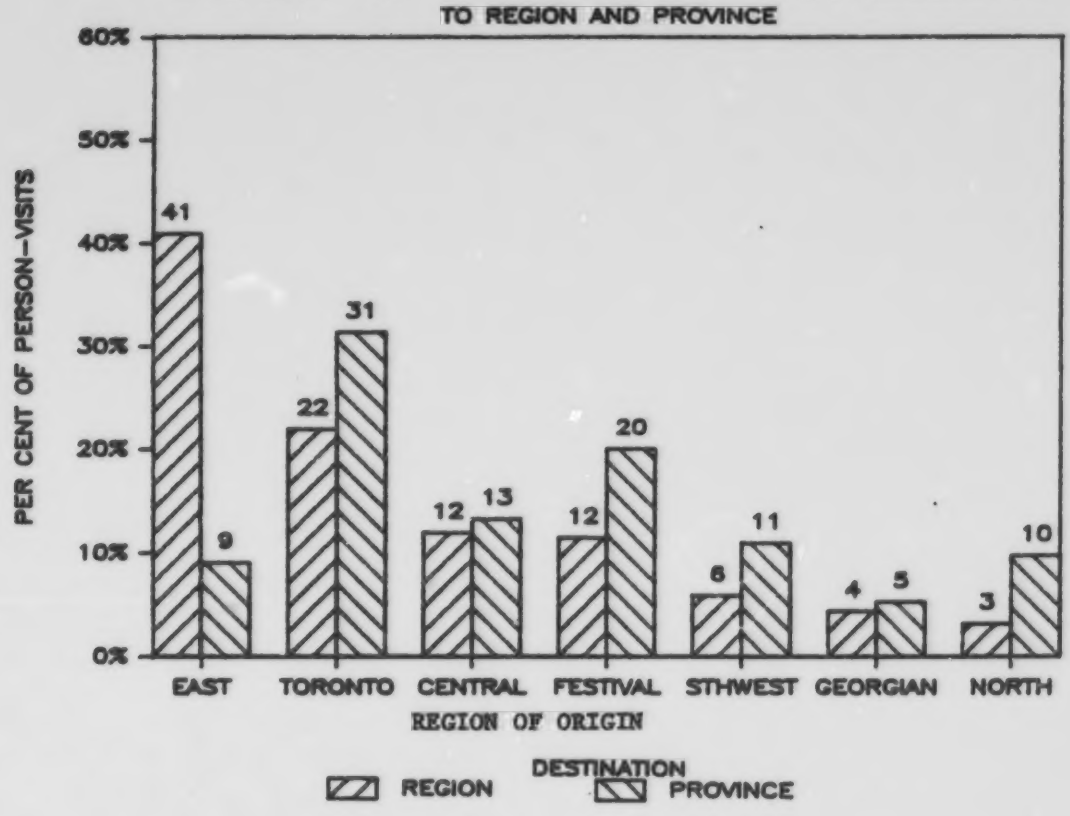
An extremely high number of same day visitors come from within the region itself. Over nine out of ten same day visitors are residents of Ontario East while only a small number of visitors are coming from outside the region. This results in a situation where although only 13 per cent of same day trips to the province originate in Ontario East, 93 per cent of visits to the region originate there. This indicates that Ontario East residents are grossly overrepresented amongst same day visitors to that region in relation to the province.

The average same day party size visiting Ontario East is 1.75 persons, which is somewhat less than the provincial average of 1.88.

(1) See Appendix III for definition.
(2) See Appendix Table II-A for total of same day person-trips for all destination regions.

ORIGIN OF OVERNIGHT TRAVELLERS

TO REGION AND PROVINCE



(ii) One Or More Nights Travel By Origin Region

Origin	Destination			
	Region		Province	
	#	%	#	%
Ontario East	1,444	41.0	2,803	9.1
Metro Toronto	773	22.0	9,653	31.4
Central Ontario	422	12.0	4,095	13.3
Festival Country	405	11.5	6,187	20.1
Southwestern	208	5.9	3,380	11.0
Georgian Lakelands	153	4.4	1,638	5.3
Ontario North	112	3.2	3,008	9.8
Total (Base: Person-Visits ('000)) (1)	3,517	100.0	30,764	100.0
Average Party Size Per Trip:	1.67		1.84	

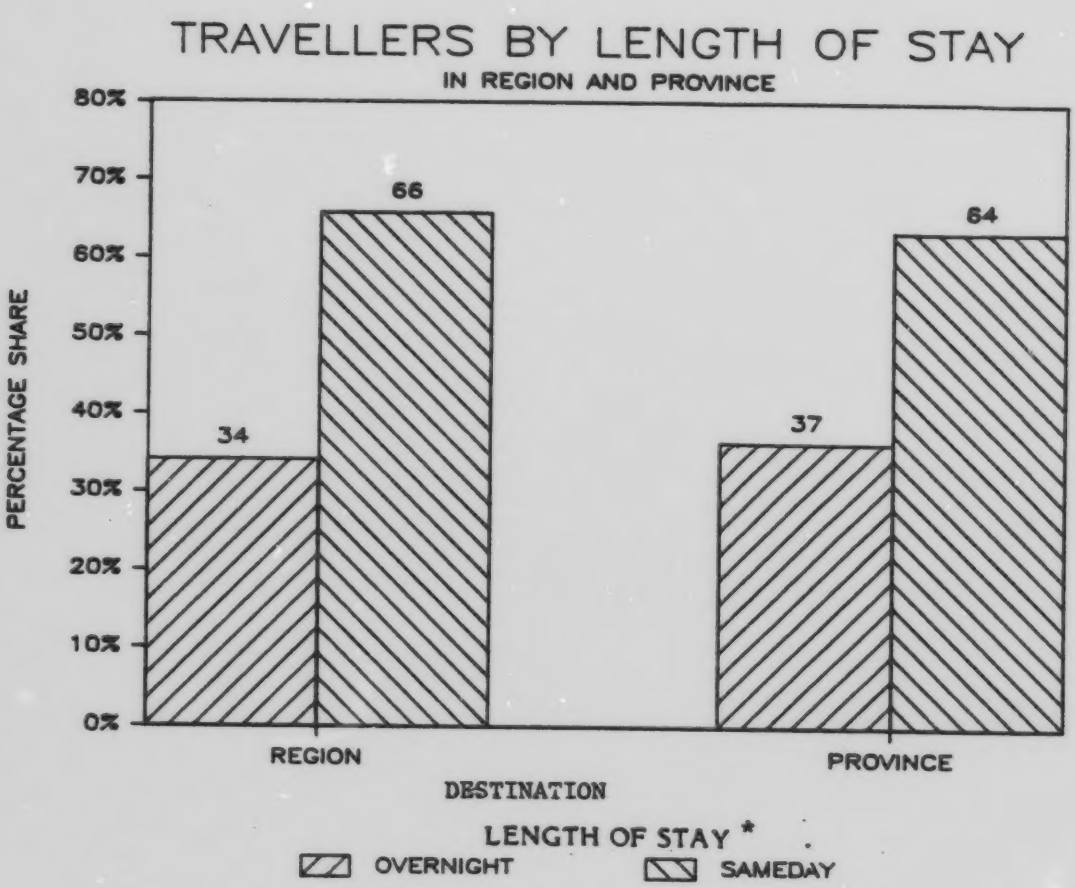
Ontario East was the destination for 3.517 million person-visits, which account for 11 per cent of all overnight person-visits within the province (2). This region ranks sixth in the number of overnight person-visits received.

Two regions account for 63 per cent of Ontario East's overnight visits. These are the region itself, with the largest number (41 per cent) and Metro Toronto (22 per cent). Two other regions, Central Ontario (12 per cent) and Festival Country (11 per cent) bring overnight person-visits up to 86 per cent.

Although only 9 per cent of overnight person-visits in the province as a whole originate in Ontario East, 41 per cent of person-visits to Ontario East originate within that region. This indicates that residents of Ontario East are highly over-represented amongst overnight visitors to that region in relation to the total province. On the other hand, overnight visitors to Ontario East originating in Metro Toronto and Festival Country are highly underrepresented.

The average overnight party size for Ontario East is slightly smaller (1.67 persons per trip) than for the province as a whole (1.84).

(1) See Appendix III for definition.
(2) See Appendix Table II-A for total of overnight person-visits for all destination regions.



* Overnight is reported in person-visits, while same day is in person-trips.

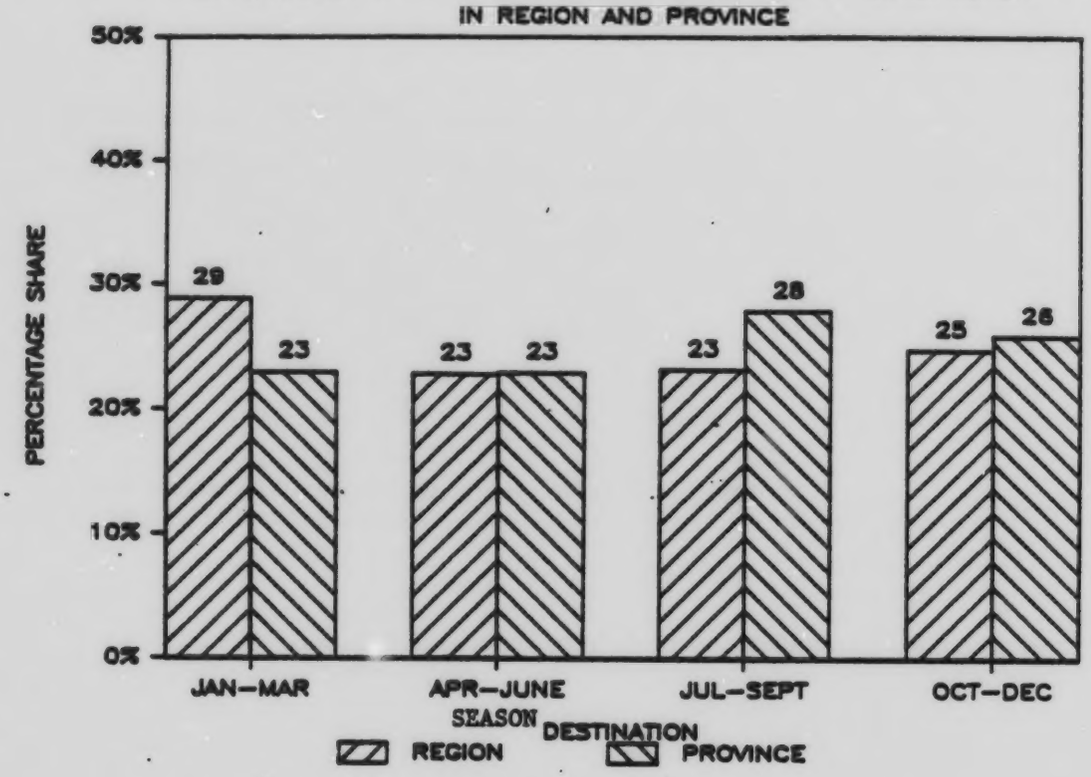
(iii) **Length Of Stay**

Length of Stay	Destination			
	Region		Province	
	#	%	#	%
Same Day (1)	6,771	65.8	53,423	63.5
One or More Nights (2)	3,517	34.2	30,764	36.5
Total	10,288	100.0	84,187	100.0

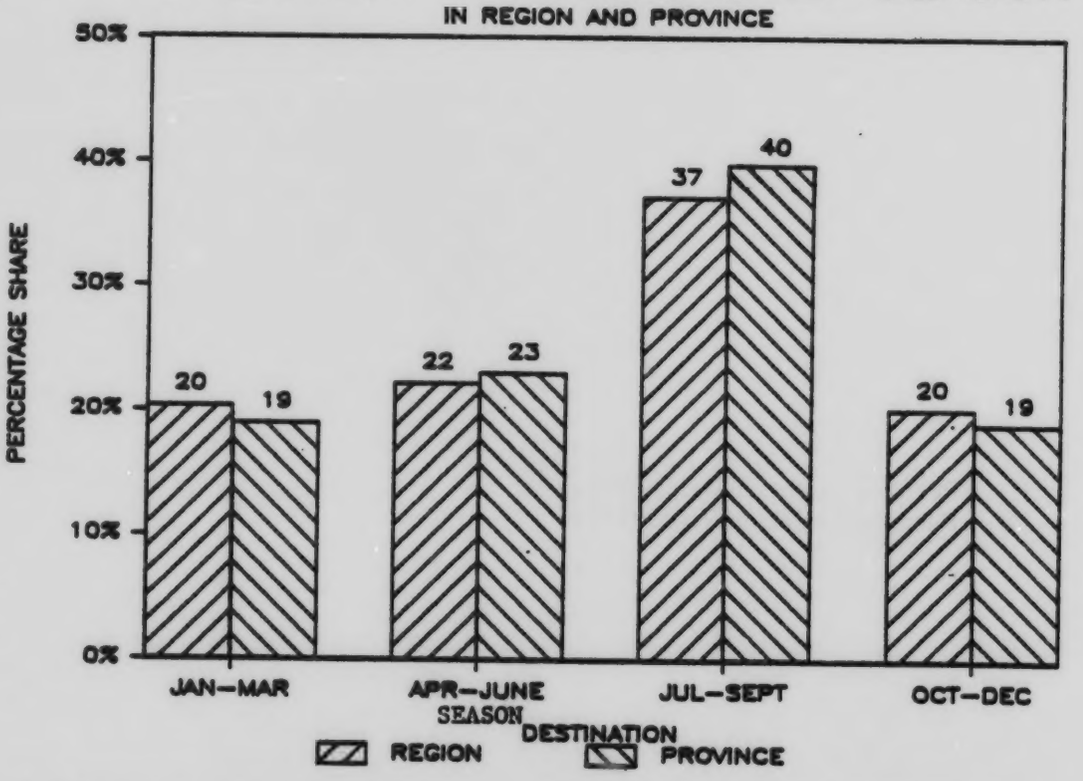
Consistent with the distribution of travellers to the province as a whole, two-thirds of travellers to Ontario East are same-day visitors and one-third are overnight visitors.

(1) Pertains to Person-Trips ('000)
(2) Pertains to Person-Visits ('000)

SAMEDAY* TRAVELLERS BY SEASON
IN REGION AND PROVINCE



OVERNIGHT* TRAVELLERS BY SEASON
IN REGION AND PROVINCE



* Overnight is reported in person-visits, and same day in person-trips.

(iv) **Seasonality By Length Of Stay**

Season	Same Day (1)	One or More Nights (2)
	%	%
Jan./Feb./Mar.	28.9	20.4
Apr./May/June	22.9	22.2
July/Aug./Sept.	23.3	37.2
Oct./Nov./Dec.	24.9	20.2
Total	100.0	100.0
Base: ('000)	6,771	3,517

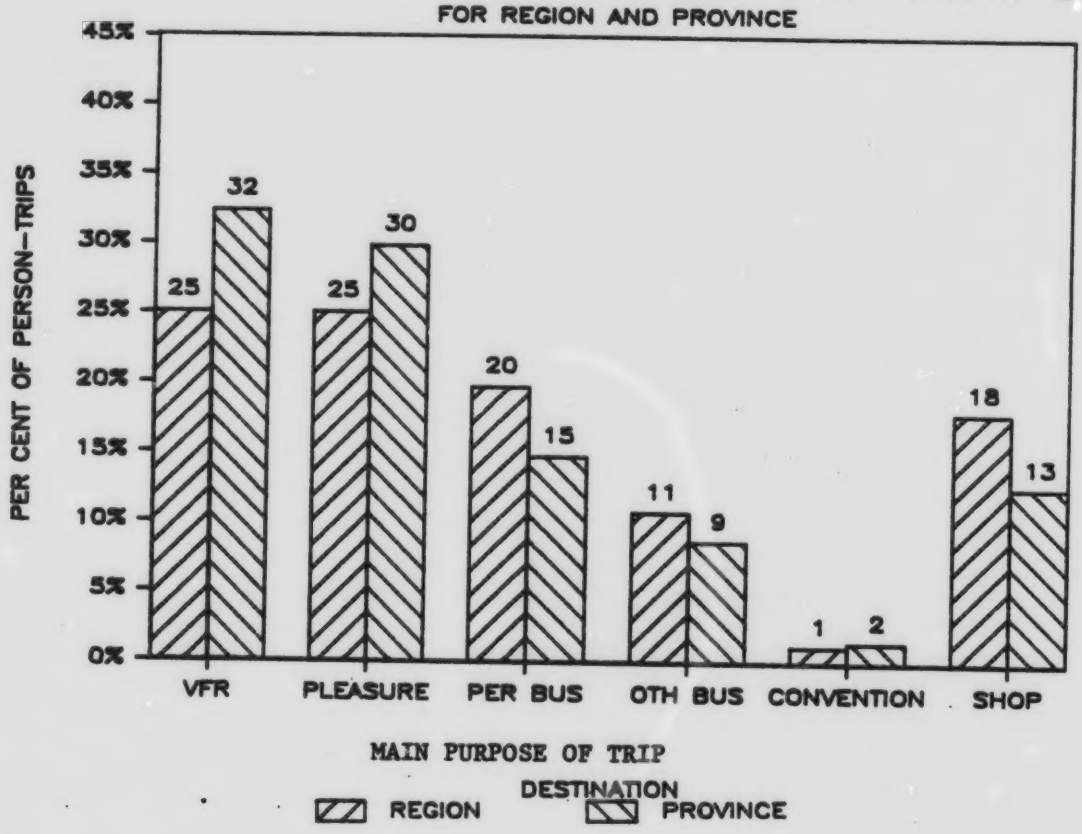
The distribution of same day person-trips to Ontario East by season is different from that found for same day trips to the province as a whole and to most other regions (3). Whereas in most cases, the largest share of person-trips is found in the third quarter (July-September), the largest proportion of same day trips to Ontario East occur in the first quarter (January-March).

The overnight person-visits, however, follow a pattern similar to the rest of the province with just over one-third of person-visits taking place in the summer quarter.

(1) Pertains to Person-Trips to the region.
(2) Pertains to Person-Visits to the region.
(3) See Appendix Table II-B for seasonality of Travel in Ontario in general.

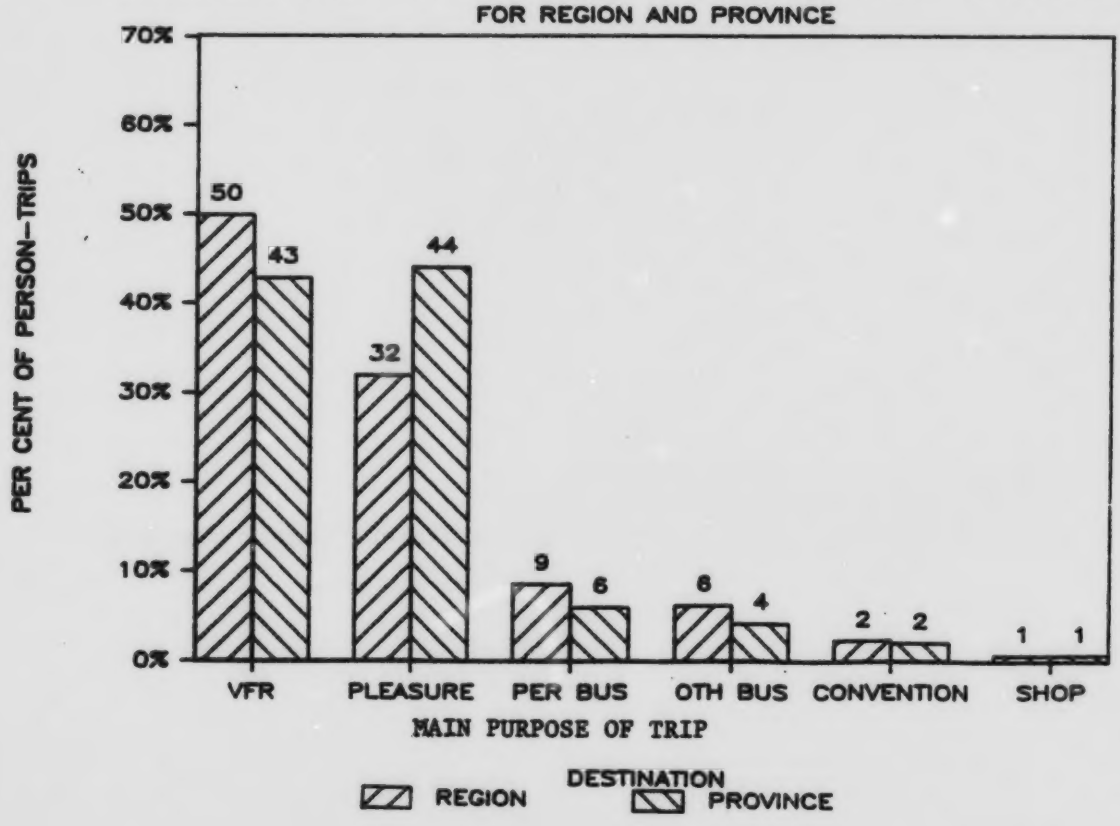
SAMEDAY TRAVELLERS BY TRIP PURPOSE

FOR REGION AND PROVINCE



OVERNIGHT TRAVELLERS BY TRIP PURPOSE

FOR REGION AND PROVINCE



(v) Trip Purpose By Length of Stay

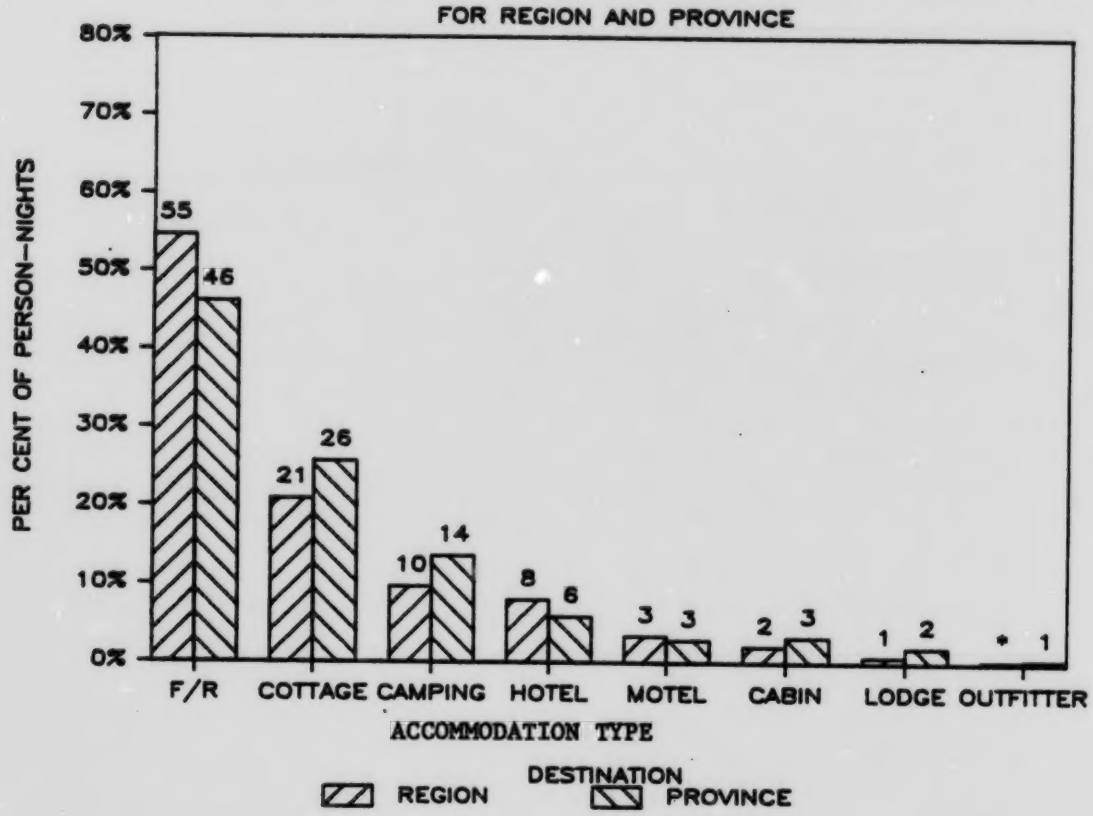
Main Purpose	Destination: Region — Same Day %	Region — One or More Nights %	Province — Same Day %	Province — One or More Nights %
Visiting Friends/ Relatives	25.1	50.0	32.4	42.9
	50.2	82.0	62.3	87.0
Recreation/ Pleasure	25.1	32.0	29.9	44.1
Personal Business	19.8	8.6	14.8	6.0
Other Business	10.8	6.3	8.7	4.2
Attending Convention	1.2	2.4	1.5	2.1
Shopping	18.0	0.7	12.7	0.7
Total	100.0	100.0	100.0	100.0
Base: Person-Trips ('000)	6,771	3,189	53,423	28,537

Person-trips for the purpose of visiting friends/relatives and recreation/pleasure make up the majority of person-trips to Ontario East. These two purposes make up fifty percent of same day trips and eighty-two per cent of overnight trips. Visiting friends/relatives and recreation/pleasure same day trips seem to be somewhat less important to the region than to the province in total. Instead, trips for certain other purposes take on more importance in the region. Proportionately more same day trips are taken in the region for personal business and shopping purposes than for the province as a whole.

A higher proportion of overnight person-trips are taken in the region for the purpose of visiting friends/relatives and a lower proportion for recreation/pleasure than is found in the province as a whole.

TYPE OF ACCOMMODATION USED

FOR REGION AND PROVINCE



* Less than 0.5%

(vi) **Accommodation**

Accommodation	Destination			
	Region		Province	
	#	%	#	%
Friends/Relatives	5,808	54.7	38,283	46.2
Private Cottage	2,218	20.9 (75.6)	21,282	25.7 (71.9)
Camping/Trailer Park	1,032	9.7	11,253	13.6
Hotel/Motor Hotel	851	8.0	4,886	5.9
Motel	363	3.4	2,370	2.9
Commerical Cottage/ Cabin	220	2.1	2,761	3.3
Resort Lodge	90	0.8	1,669	2.0
Outfitter/Outpost	34	0.3	439	0.5
Total (Base: Person-Nights ('000))	10,616	100.0	82,943	100.0

Within the region, non-commercial accommodation is used for 76 per cent of person-nights. This is consistent with what is found for the province as a whole. Where the region differs, however, is in the distribution of person-nights between staying with friends/relatives and at private cottages. Fifty-five per cent of person-nights spent in Ontario East are spent with friends/relatives compared with only 46 per cent for Ontario at large. By the same token, private cottage is underrepresented in Ontario East compared with the total province.

Of the commercial accommodation used in the region (24 per cent of person-nights), camping/trailer parks account for the largest percentage, followed by hotel/motor hotel and then motel.

(vii) Activities In Or Around Main Destination By Length Of Stay

Activities	Same Day	One or More Nights
	%	%
Went Shopping	32.4	33.5
Participated In Outdoor Or Sporting Activity	12.7	34.1
Attended ...		
Sporting Events	5.3	6.8
Live Theatre, Dance or Music Concert	2.8	6.1
Visited ...		
Museums, Galleries	2.1	7.1
Historical Site	3.8	13.4
Exhibitions, Fairs, Special Events	3.2	7.3
Attractions, Zoos, Amusement Parks	0.4	5.1
Went on Boat or Rail Tours	0.7	4.6
Other Activities	44.9	47.0
Total (1)	108.3	165.0
Base: Person-Trips ('000)	6,771	3,189
Average No. of Activities per Person-Trip:	1.08	1.65

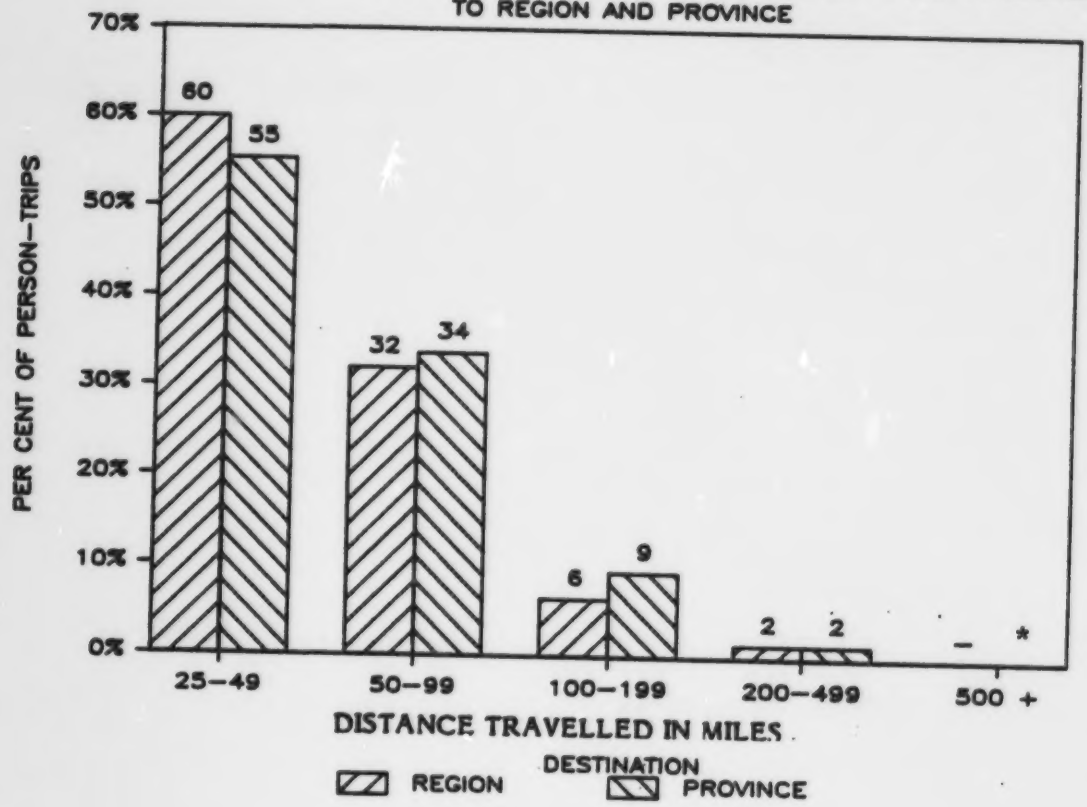
The two most important activities on same day trips are shopping (32 per cent) and participating in an outdoor activity (13 per cent). These two activities also rank highest on overnight trips although, in the case of outdoor activities, a greater proportion of person-trips are associated with the activities than on same day trips (34 per cent versus 13 per cent).

Most of the other activities measured also tend to have a greater proportion of overnight trips associated with them than same day trips. This may be because the longer overnight trip allows for more activities. Consistent with this is the finding that the average number of activities per person-trip associated with overnight trips is greater (1.65) than same day trips (1.08).

(1) Percentages add to more than 100 per cent as person-trips can be associated with multiple activities.

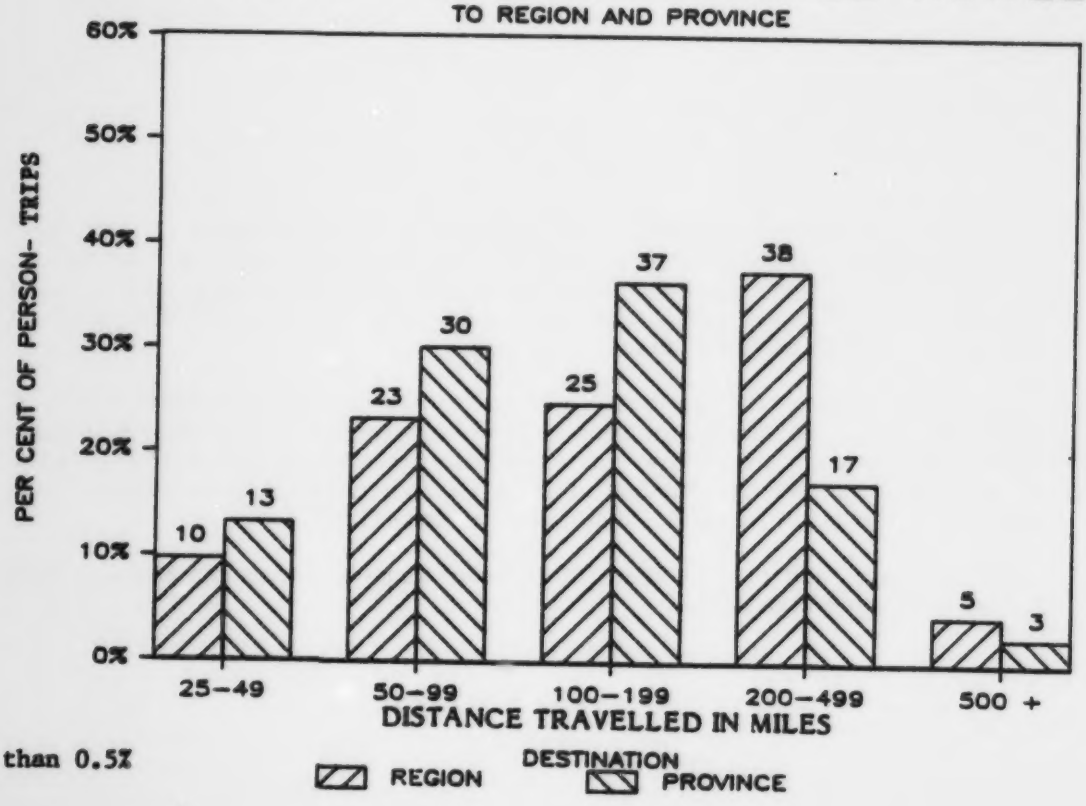
SAMEDAY VISITS BY DISTANCE TRAVELLED

TO REGION AND PROVINCE



OVERNIGHT VISITS BY DISTANCE TRAVELLED

TO REGION AND PROVINCE



* Less than 0.5%

(viii) Distance Travelled To Main Destination

Distance	Destination: Region — Same Day %	Region — One or More Nights %	Province — Same Day %	Province — One or More Nights %
25-49mi/40-79km	60.1	9.8	55.4	13.3
50-99mi/80-159km	32.0	23.3	33.7	30.2
	92.1	33.1	89.1	43.5
100-199mi/160-320km	6.4	24.8	9.4	36.5
200-499mi/321-804km	1.5	37.6	1.5	17.4
500mi/805km and over	-	4.6	*	2.6
		42.2		20.0
Total	100.0	100.0	100.0	100.0
Base: Person-Trips ('000)	6,771	3,189	53,423	28,537

Consistent with the time restrictions inherent in a same day trip, almost all same day trips are within 100 miles from home. This is true for both same day trips to the region (92 per cent) and within the province in general (89 per cent).

For the region, there are fewer short distance overnight trips (i.e. less than 100 miles) than for the province in total and more long distance trips (i.e. 200 miles or more). About twice as many overnight person-trips are coming to the region from a distance of over 200 miles (42 per cent) as are coming to the total province from that same distance (20 per cent). These longer distances travelled reflect the greater distances between major population centres.

* Less than .05 %

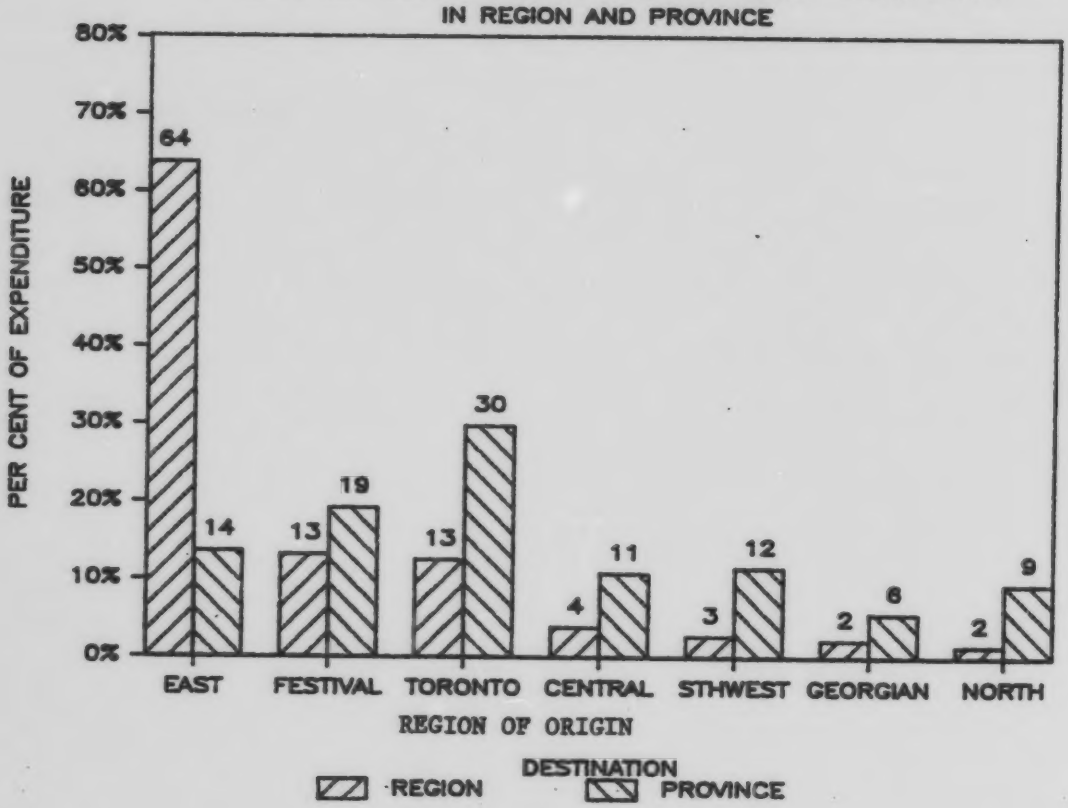
(ix) **Mode Of Transportation By Length of Stay**

Mode	Destination	
	Same Day	One or More Nights
	%	%
Automobile/Van	95.4	91.2
Bus (Scheduled/Chartered)	3.5	4.5
Air (Scheduled/Chartered)	0.9	1.8
Train	-	1.9
Ship/Boat	-	0.5
Other	0.3	0.1
Total	100.0	100.0
Base: Person-Trips ('000)	6,771	3,189

The dominant mode of travel, regardless of length of stay, is the automobile, which is used by over 90 per cent of both same day and overnight travellers.

TOTAL EXPENDITURE BY ORIGIN

IN REGION AND PROVINCE



TRIP EXPENDITURES

(i) Expenditure By Origin Region

Expenditure (Millions of Current $)

Origin	Destination: Region $	Region %	Province $	Province %
Ontario East	415.8	63.9	554.0	13.7
Festival Country	86.1	13.2	779.3	19.2
Metro Toronto	81.6	12.5	1,208.2	29.8
Central Ontario	25.1	3.9	437.1	10.8
Southwestern	17.9	2.8	468.6	11.5
Georgian Lakelands	14.7	2.2	228.3	5.6
Ontario North	9.8	1.5	380.3	9.4
Total	651.0	100.0	4,055.8	100.0

Ontario East receives 16 per cent of total tourism revenue generated within the province or $651 million (1). Interestingly, the Ontario East region receives the second lowest share of overnight visitation to the province, but the second highest share of tourism expenditure. This anomaly is due in large part to the very high average expenditure per trip by travellers in this region.

Residents of Ontario East overwhelmingly generate the largest share of tourism expenditure in the region (64 per cent) at $415.8 million. Lagging far behind is the next largest generator of tourism revenue to the region, Festival Country at $86.1 million.

Ontario East receives three-quarters of the total tourism expenditures made by the region's own residents in Ontario.

(1) See Appendix Table II-C for total expenditure by origin and destination regions.

(ii) Average Expenditure by Origin and Destination Region

Average Expenditure Per Traveller Per Trip (1) (Current$)

Origin of Travellers In Region		Destination Region	
	$		$
Festival Country	190.49	Ontario East	63.28
Metro Toronto	94.77	Metro Toronto	62.79
Georgian Lakelands	88.02	Ontario North	56.50
Southwestern	86.06	Southwestern	42.53
Ontario North	71.01	Central Ontario	41.26
Ontario East	53.93	Georgian Lakelands	38.23
Central Ontario	33.38	Festival Country	37.76
Regional Average	63.28	Provincial Average	48.18

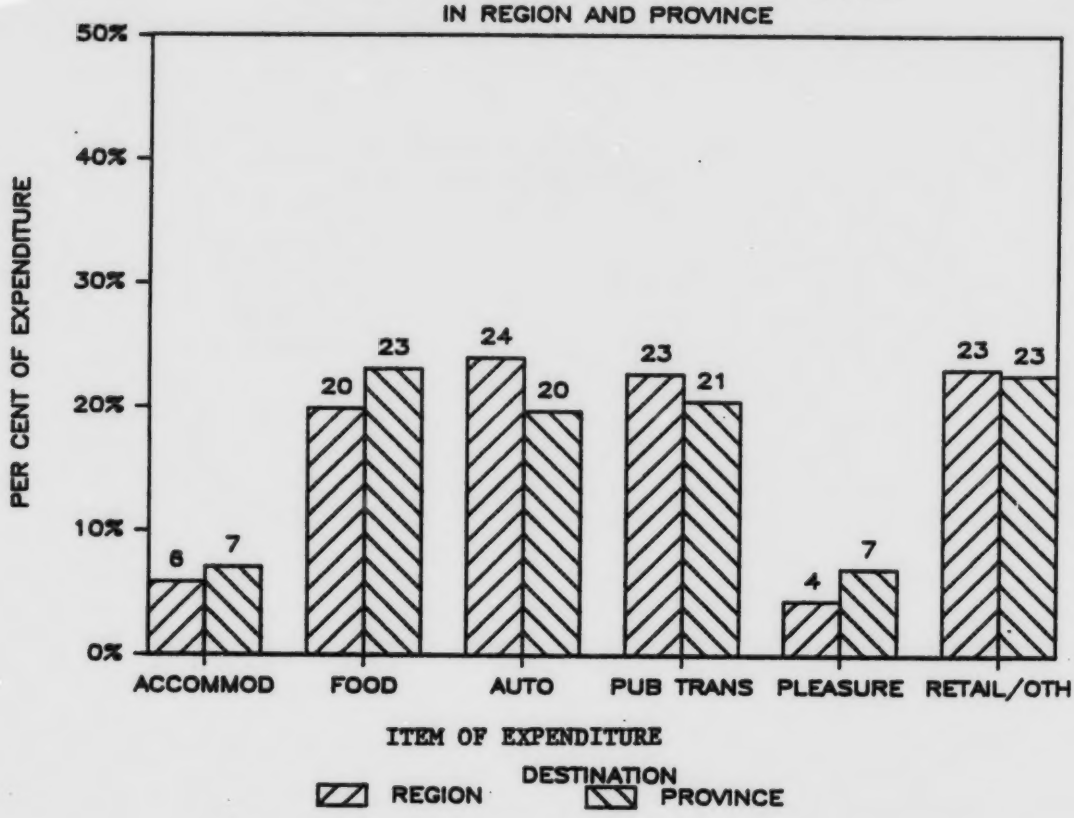
The average expenditure in Ontario East ($63.28) is well above the average for the province as a whole ($48.18). This is primarily a function of the very high average expenditures generated by travellers coming to Ontario East from the more distant regions.

The highest average expenditure in the region is generated by Festival Country residents ($190.49), followed by Metro Toronto ($94.77) and Georgian Lakelands ($88.02). These above average expenditures could be due in some part to the longer travel distance from these regions to Ontario East and thus a resulting tendency towards a longer length of stay in the main destination region.

(1) Any length of stay.

ITEMIZED EXPENDITURE

IN REGION AND PROVINCE



(iii) **Itemized Expenditure**

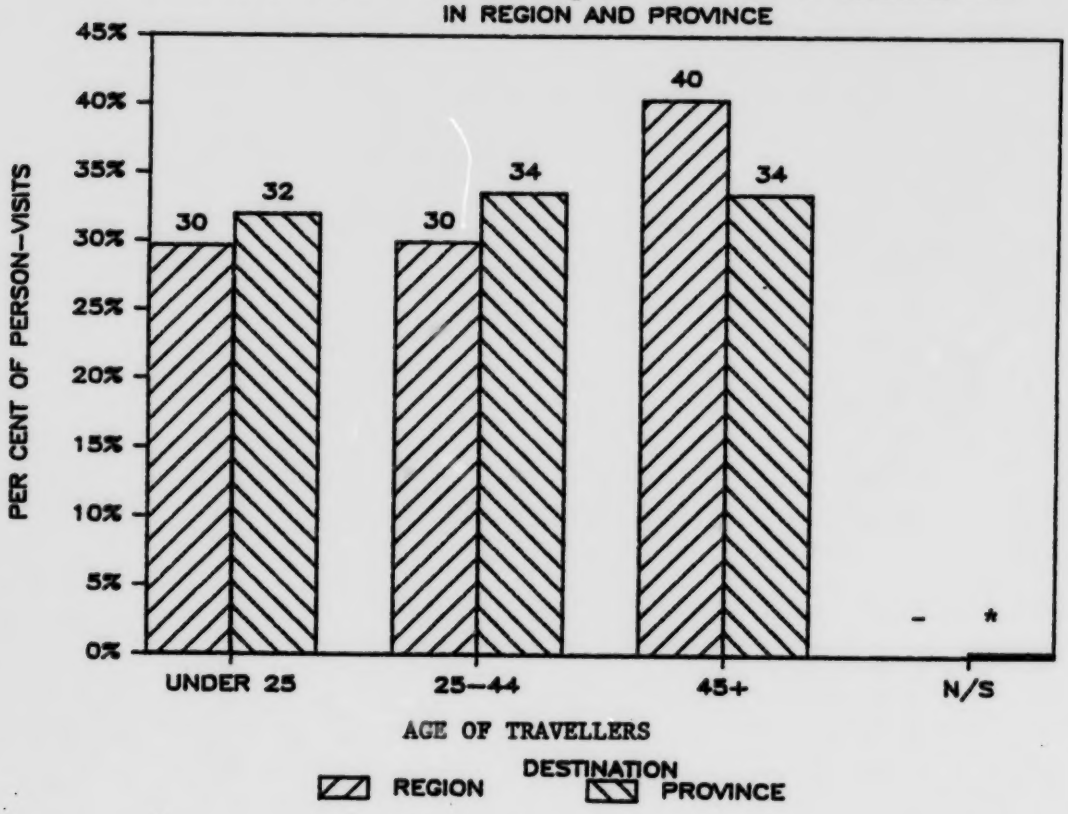
Expenditure (Millions of Current $)

Item	Destination			
	Region		Province	
	$	%	$	%
Automobile	156.2	24.0	798.6	19.7
Retail/ Other Miscellaneous	150.8	23.1	915.7	22.6
Public Transportation (Canadian Carriers)	147.8	22.7	832.6	20.5
Food/ Beverage	129.4	19.9	934.5	23.1
Accommodation	38.2	5.9	289.3	7.1
Recreation/ Pleasure	28.6	4.4	285.1	7.0
Total	651.0	100.0	4,055.8	100.0

Automobile accounts for the largest direct tourism expenditure in the region at $156.2 million. This category ranks fourth for the province as a whole. Conversely, food/ beverage which ranks as the largest expenditure for the province, ranks fourth for the region. A high incidence of visiting friends/ relatives leads to a proportionately lower food/ beverage expenditure. Other major expenditure items for the region are retail purchases (23 per cent) and public transportation (23 per cent).

AGE OF OVERNIGHT TRAVELLERS

IN REGION AND PROVINCE



* Less than 0.5%

SOCIO-ECONOMIC CHARACTERISTICS OF OVERNIGHT TRAVELLERS

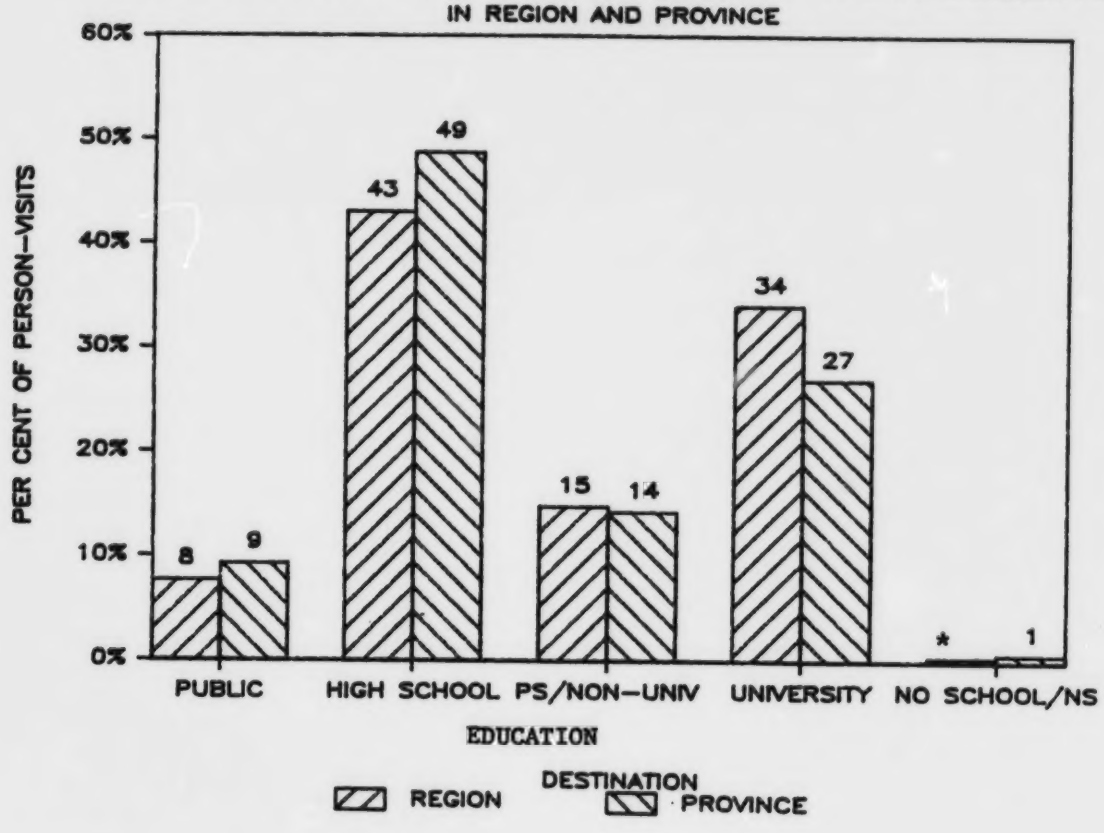
(i) Age Of Overnight Travellers

Age	Destination: Region %		Destination: Province %	
Under 15 years	13.2		17.2	
15 - 19 years	5.0	29.7	6.1	32.0
20 - 24 years	11.5		8.7	
25 - 34 years	17.6		18.9	
		30.0		33.6
35 - 44 years	12.4		14.7	
45 - 54 years	19.6		13.5	
55 - 64 years	14.1	40.4	12.3	34.2
65 Years and Over	6.7		8.4	
Did Not State	-		0.3	
Total	100.0		100.0	
Base: Person-Visits ('000)	3,517		30,764	

Any grouping of travellers by age is, to a large extent, an arbitrary one. Looking at the distribution of travellers by age, however, we find that the numbers lend themselves to division into approximately thirds. About one-third of overnight travellers are under 25 years, another third between 25 and 44 years, and a little more than a third 45 years and over. In doing so, we find that Ontario East tends to have a more mature visitor profile than the province as a whole. Fewer overnight visitors to the region are under 45 years and more are 45 years or older. In fact, a large portion of the difference appears to be due to an over-representation of people within the age range of 45-54 years.

EDUCATION OF OVERNIGHT TRAVELLERS

IN REGION AND PROVINCE



* Less than 0.5%

(ii) Education Level of Overnight Travellers

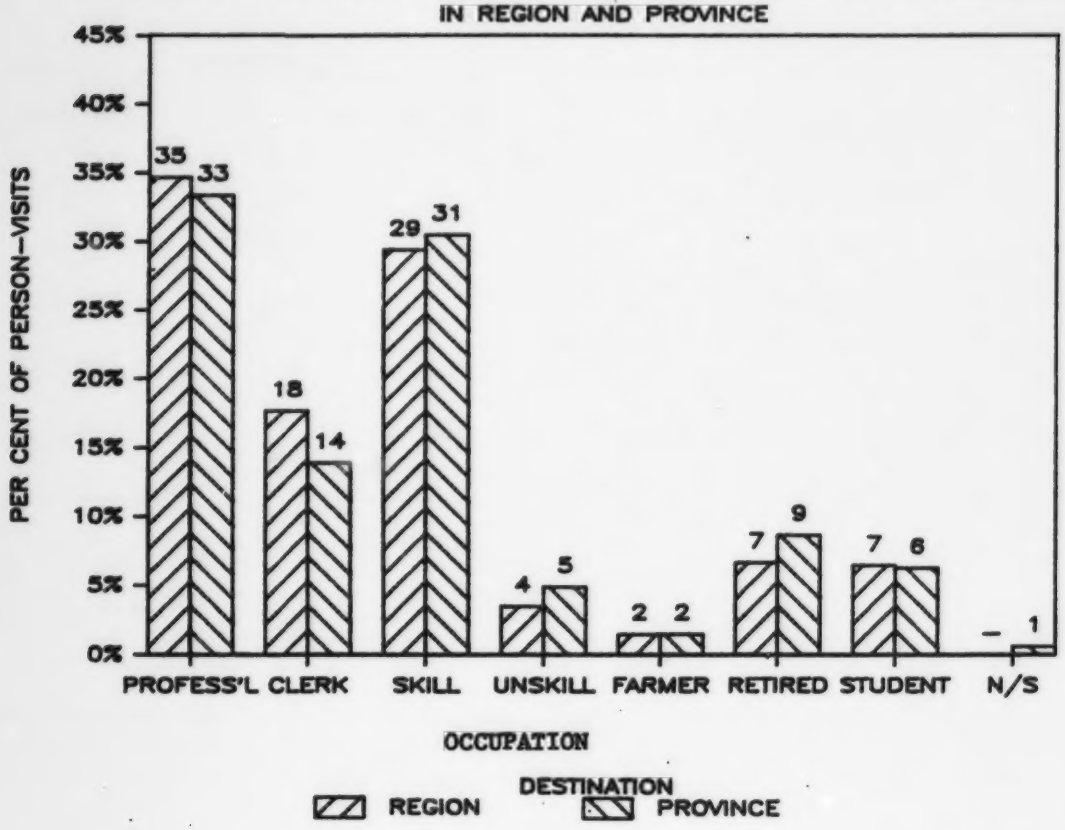
Education (1)	Destination			
	Region %		Province %	
Public/Elementary	7.7		9.3	
Secondary/High School	43.1		48.8	
Post-Secondary (Non-university)	14.8	48.9	14.3	41.3
University	34.1		27.0	
No Formal Schooling	0.4		0.1	
Did Not State	–		0.6	
Total	100.0		100.0	
Base: Person-Visits ('000)	3,054		25,475	

About five out of ten Ontario East overnight travellers have completed post secondary schooling. This is a somewhat higher proportion than for overnight travellers to the province in general (four out of ten).

(1) Pertains to travellers 15 years of age and over

OCCUPATION OF OVERNIGHT TRAVELLERS

IN REGION AND PROVINCE



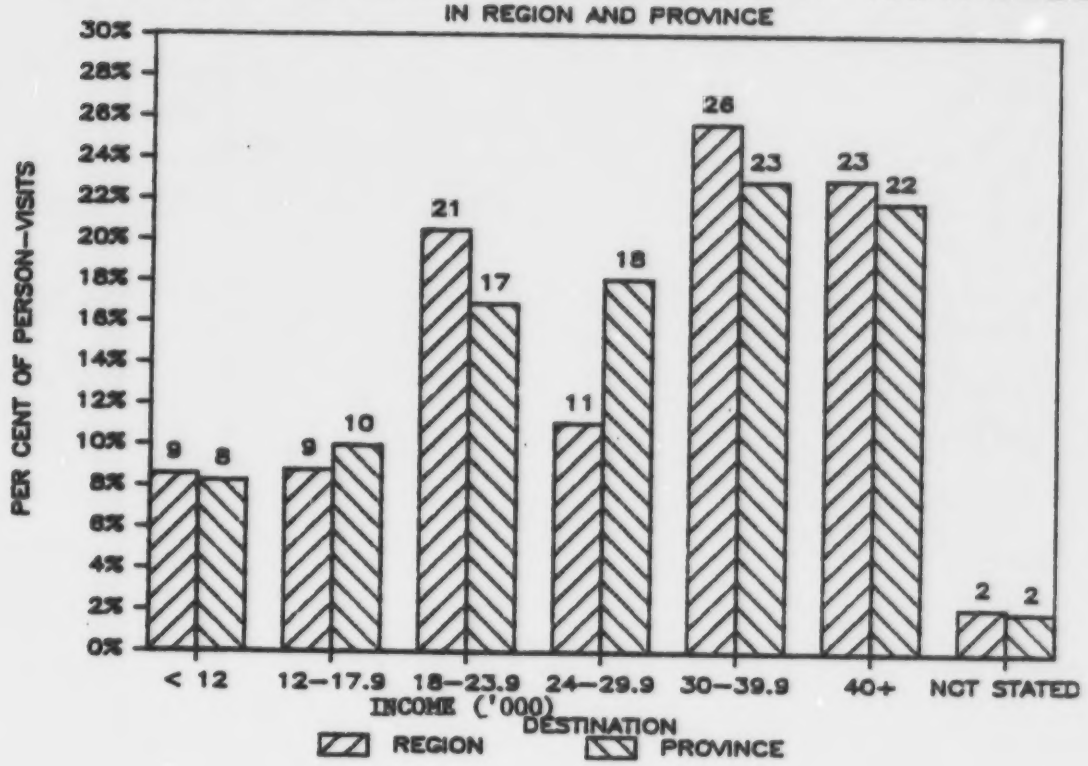
(iii) Occupation (Chief Wage Earner) Of Overnight Travellers

Occupation	Destination			
	Region		Province	
	%		%	
Professional, Business Executive, Owner/ Manager	34.7	64.1	33.4	63.9
Skilled Labour	29.4		30.5	
Sales/ Clerical	17.7		13.9	
Unskilled Labour	3.5		4.9	
Farmer	1.5		1.5	
Retired, Pensioned	6.7		8.7	
Student/ Unemployed/ Homemaker	6.5		6.3	
Did Not State	—		0.6	
Total	100.0		100.0	
Base: Person-Visits ('000)	3,517	30,764		

Almost two thirds (64 per cent) of visitors to the region come from households where the chief wage earner is a professional/ business person or a skilled labourer. This is consistent with the provincial profile. Retired/ pensioned visitors are slightly underrepresented in this region compared to the province in total.

HHOLD INCOME OF OVERNIGHT TRAVELLERS

IN REGION AND PROVINCE



(iv) Household Income Of Overnight Travellers

Household Income	Destination: Region %		Destination: Province %	
Less than $12,000	8.6		8.3	
$12,000 - $17,999	8.8	17.4	10.0	18.3
$18,000 - $23,999	20.5		16.9	
$24,000 - $29,999	11.1	31.6	18.1	35.0
$30,000 - $39,999	25.7		22.9	
$40,000 and over	23.0	48.7	21.9	44.8
Did Not State	2.2		2.0	
Total	100.0		100.0	
Base: Person-Visits ('000):	3,517		30,764	

The region receives a higher proportion of visitors from the $30,000 and over household income category than does the province as a whole. Close to one-half (49 per cent) of Ontario East's overnight visitors have a household income of $30,000 or more. About one-third (32 per cent) of the region's visitors are in the mid-income category of $18,000 to $29,999 or slightly under the 35 percent found in the total province.

APPENDIX III

DEFINITIONS

A. MEASUREMENT OF HOUSEHOLD TRAVEL

1. Household-Trip

A trip involving one person or a group of persons from the same household, leaving and returning together. For example, if four persons from one household leave and return together, it counts as one household-trip. If they all belong to different households, it counts as four household-trips.

2. Person-Trip*

A trip taken by one person, either singly or in a group. If four persons go on a trip together, it counts as four person-trips.

3. Person-Night

A night spent by a person on a trip. For example, if two persons take a trip involving three nights away from home, there is a count of six person-nights.

4. Person-Visit*

A person-trip which is counted more than once if there is an overnight stop in more than one area of the province. For example, if two persons stop overnight in one area and then stop overnight in another area, there is a count of four person-visits.

*During the survey, two methods were used to ascertain the destination of each trip. The respondent was asked for his/her main destination (or place furthest from home) on each trip. This approach, although simplest, does not enable an accurate measure of the actual number of people visiting each region. For example, a resident of southwestern Ontario might give Ottawa as his main destination, when, en route, he also stayed overnight in Metro Toronto and Belleville. Thus in order to estimate the number of visitors to each region more accurately, respondents were also asked to name every place where they had stayed overnight.

B. EXPENDITURE TYPES

1. Automobile

Expenditure on gas/oil/maintenance during trip or prior (when part of prepaid package), and also pertains to trucks, campers and other recreational vehicles such as boats, snowmobiles, etc. Included also are rental costs for autos or other motor vehicles.

2. Public Transportation

Expenditure on fares paid to Canadian carriers only, either during trip or prior (when part of prepaid package), for any destination. Includes local transportation expenditure within the local area or any places stopped at during the trip, and pertains to taxis, public transit, etc.

3. Accommodation

Expenditure made in regards to commerical accommodation rooms/units, either during or prior (when part of prepaid package).

4. Food/Beverage

Expenditure on food either during trip or prior (when part of prepaid package), and on beverages, and includes food and/or beverage portion of accommodation bills.

5. Recreation/Pleasure

Expenditure made either during trip or prior (when part of prepaid package) on user fees, admissions and rental fees, and pertains to such items as recreational facilities, sporting events, amusement parks, attractions, night clubs, theatres, cultural activities, fish and game licences, rental of boats, snowmobiles, equipment, etc.

6. Retail/Other Miscellaneous

Retail trade purchases during trip on such items as souvenirs, gifts, medical costs, clothing, personal services (i.e. laundry, barber, etc.), art, appliances, furnishings, etc.

APPENDIX IV

TECHNICAL REPORT

A. THE SAMPLE

1. Universe Covered

The universe sampled was all households in Ontario, excluding military bases, Indian reserves, institutions and the most remote northern areas.

2. Sampling The Universe

The sample was drawn in four main quarterly sample replicates, each representing the Ontario population of households. Each quarterly sample was then randomly allocated into three monthly samples.

The primary sampling unit (PSU) was the Enumeration Area (E.A.). The selection of PSU's was carried out separately for urban areas of 10,000 population or more and for rural/small urban areas.

a) Urban Areas--10M Population or Greater

Each of the urban areas in Ontario with population 10M or greater was represented at least once. In total, 50 localities were included. For each locality, EA's were randomly selected proportionate to population from a list of stratified EA populations. The stratification variables were income within geographic area.

The selected EA's were then stratified by city size within six geographic regions of the province and allotted in sequence to each of the four quarterly samples. Each of the quarterly samples were then allocated in the same manner to each of the three months of the quarter.

b) Small Urban and Rural Areas

For rural and small urban areas, 86 areas were selected proportionate to population from a cumulative list of such locations. Within each of the selection locations, an average of 2.8 PSU's were selected based on the geographically stratified EA's within the location. Each of the PSU's was then allocated to a separate quarter of the year.

Within each selected PSU (EA) a block (or route in the case of rural areas) was selected at random. The households were selected at specific intervals on the block. No substitution of these households was permitted. A 9-household cluster size in urban areas and an 8-household cluster size in rural areas was specified.

B. THE TRIP

The main purpose of the study was to determine the number of qualifying trips by households and individuals, and to describe those trips in terms of origin, destination, purpose, activities, mode of transportation, expenditure and accommodation. A qualifying trip was defined as a round trip to a location of at least 25 miles one way from home, for a purpose other than:

- commuting to school or work
- as an operator or crew member of commerical carriers (including trucks)
- for sales calls or deliveries

Within a household all qualifying trips were covered except those by children under 15 when not accompanied by an adult (15+) member of that household.

C. DATA COLLECTION

Prior to production of the final field materials, the household questionnaire, the Trip Diary and the interviewer instructions were subjected to field pre-tests. The final pre-test entailed the installation of 25 diaries and the completion of 24. Field procedures and the questionnaire formats were examined in detail subsequent to completion of the pre-test. Changes indicated by the pre-test were incorporated into the final documents used in the study.

1. Fieldwork

The data were collected by two methods:

1) A personal interview.

2) A diary left with the household for a two month period.

Up to four visits were made to obtain contact and cooperation from the households. At the initial interview information was obtained on basic household and individual characteristics, and recent travel. Instruction was also given on the completion of the diary and eventual collection.

During the two month diary period three interim telephone calls were made to the person responsible for the diary. The first took place as close as possible to the second day of the first recording month, the second at the beginning of the second month, and the third just a day or two prior to scheduled pick-up. The purpose was to motivate continuance in the project and to clarify any aspects of reporting that might have arisen. At the end of the period the diary was personally collected. The completeness of the record was reviewed at this time.

Specific Field Controls

When Trip Diaries were first placed in a household, interviewers described the features that would facilitate completion by the respondent.

Four Example Trips

Narrative descriptions of four "example" trips were presented at the front of the Trip Diary, along with corresponding "completed" diary pages. Respondents were taken through a minimum of one of these examples by the interviewer at the time the diary was placed.

Trip Recording Directions Fold-Out

The Trip Diary was constructed with a fold-out sheet at the back, and respondents were instructed to open the Trip Recording Directions fold-out while completing a Trip Diary page. In the extended position, the respondent would be faced with a Trip Diary page on the left, and recording instructions (along with reference codes for further discussion of an item in the guide) on the right. This

procedure was designed to ensure maximum accessibility to reference information as the trip information was being recorded, and was demonstrated to the respondent by the interviewer at the time of placement.

The Guide

A detailed Guide for completing the Trip Diary, cross-referenced by item number to the Trip Recording Directions fold-out, was included in the Trip Diary binder. These detailed instructions included information on definitions, and provided examples of types of items that should be included in specific categories. Interviewers reviewed the Guide with respondents during the placement interview.

Travel Expense Log

Portable Travel Expense Logs were provided in a binder pocket of the Trip Diary. These booklets were designed as memory aids in which respondents could log expenses as they occurred. Interviewers advised respondents to take the Log along on household trips, especially when such trips were to involve overnight stays. Respondents were also instructed to transfer information entered in the Log to the Trip Diary.

Other procedures in place in the course of the fieldwork to maximize the accuracy of the data included:

-- a Diary Review Checklist of items in the Trip Diary to be examined by the interviewer at final retrieval. This checklist included an edit of the Trip Diary for internal consistency, missing information, and legibility; and

-- a mail-back envelope for return of the Trip Diary if the respondent was not available for either of two pre-established retrieval interviews.

The person responsible for ensuring the diary was completed was typically the female head of the household. This procedure was intended to maximize response, since in the supplier's experience, greater cooperation is received from female heads of household, both in the acceptance and regular reporting of household diary studies. An incentive was offered. For each of the 12 sample months, diary completers were included in a draw for a cash prize of $300. Of all households eligible to receive a diary 72 per cent were interviewed and 51 per cent both accepted and completed the diary.

2. Analysis Of Response

The figures below show the yield from the first stage household interview and the second stage diary completion for the four quarterly samples and in total.

	SAMPLE				
	Months 1-3	Months 4-6	Months 7-9	Months 10-12	Total 12 Months

Accepted Diary --Completed	1171	53	1072	51	1028	49	1041	50	4312	51

D. EXPENDITURE DATA

The primary purpose of the expenditure data collected was to estimate the revenue that accrues to Ontario, and to different regions of Ontario, during qualifying trips. The trips recorded were of many different types:

-- Trips within Ontario;

-- Trips with destinations outside of Ontario;

-- Overnight trips or same-day trips;

-- Trips with stops in more than one region.

The allocation of expenditure for the different types of trip is described below.

For each household trip, total expenditure within Ontario and outside Ontario was collected in the following categories:

-- Automobile;

-- Local transportation;

-- Air/train/bus/ship --Canadian carrier;
--Foreign carrier;

-- Accommodation;

-- Food/Beverage;

-- Recreation/Pleasure;

-- Retail Sales and Miscellaneous.

For trips paid by prepaid package or tour, the total amount of the package was obtained as well as the specific items included in the package.

In order to correctly allocate expenditure as accruing to Ontario, a number of specific edit rules were applied. These are described briefly in the following pages under two headings:

1. Prepaid Package Expenditure;

2. Non-Prepaid Exenditure:

   a) Ontario Destination Travel;

   b) Non-Ontario Destination Travel.

1. Prepaid Package Expenditure

a) In order to allocate expenditures made on packages to individual items, it was necessary to determine the ratio of these items to each other. Therefore, for all trips <u>without</u>

prepaid expense, average expenditure per trip was calculated for specific categories of expenditure within classifications of trips. The matrix used was of the following type:

	Same Day Travel Destination				One Or More Nights Travel Destination			
	Ont.	USA	Other Prov.	Other Country	Ont.	USA	Other Prov.	Other Country
Expenditure Category:								
Automobile	X	X	X	X	X	X	X	X
Air, Train, Bus, Ship	X							
--Canadian Carrier	X							
--Foreign Carrier	X							
Accommodation	X							
Food/Beverage	X							
Recreation/ Pleasure	X							

b) For all trips with prepaid package the total number of trips in each of the above cells was determined.

c) Using the average expenditure per trip determined in (a) above a total expenditure value for each category and in total was calculated for all trips with prepaid package.

d) The derived category expenditure distribution obtained in (c) was then applied to the total dollar value given for the various duration/destination categories of trips with prepaid package.

e) Itemized prepaid expenditure derived in (d) above was allocated as follows:

Ontario Destination Travel

-- air/train/bus/ship--Canadian Carrier expenditure was assigned to region of origin.

-- all other expenditure items were assigned to regions of main destination (or further point).

Non-Ontario Destination Travel

-- air/train/bus/ship--Canadian Carrier expenditure was assigned to region of origin.

-- all other expenditure items were assigned to either USA, other province or other country, by items.

2. **Non-Prepaid Expenditure**

a) **Ontario Destination Travel**

Automobile

Automobile expenditure was assigned on the basis of number of person-nights spent in any of the 12 Ontario destination regions. For same day travel (0 person-nights), the expenditure was assigned to the region of origin.

Local Transportation

-- expenditure was assigned to region of main destination (or furthest point).

Air/Train/Bus/Ship

-- Canadian carrier expenditure was assigned to region of origin.

Accommodation

-- accommodation expenditure was assigned on the basis of number of person-nights spent in any of the 12 Ontario regions.

Food/Beverages

-- food and beverage expenditure was assigned on the basis of number of person-nights spent in any of the 12 Ontario regions. For same-day travel (0 person-nights), the expenditure accrues to the region of main destination (or furthest point).

Recreation/Pleasure

-- expenditure was assigned on the basis of number of person-nights spent in any of the 12 Ontario regions. Same day travel expenditure accrues to the region of main destination (or furthest point).

Retail/Other Miscellaneous

-- expenditure was assigned to region of main destination (or furthest point.

b) **Non-Ontario Destination Travel**

Automobile

-- expenditure outside Ontario was assigned to main destination (USA, Other Province, Other Country).

-- if expenditure was also in Ontario, it was assigned on the basis of number of person-nights spent in any of the 12 Ontario regions. If no overnight stops made in Ontario, the expenditure accrued to the Ontario region of origin.

Local Transportation

-- expenditure assigned to region of main destination (USA, Other Province, Other Country).

Air/Train/Bus/Ship

-- if Canadian Carrier indicated, expenditure was assigned to Ontario region of origin.

- if Foreign Carrier indicated, any expenditure made in Ontario or outside Ontario was assigned to USA or Other Country main destination.

Accommodation

-- expenditure outside of Ontario was assigned to main destination (USA, Other Province, Other Country).

-- if expenditure also in Ontario, it was assigned on basis of number of person-nights spent in any of the 12 Ontario regions.

Food/Beverage

-- expenditure outside Ontario was assigned to main destination (USA, Other Province, Other Country).

-- if expenditure was also in Ontario, it was assigned on basis of number of person-nights spent in any of the 12 Ontario regions. If no overnight stops made in Ontario, it was assigned to a separate destination category "Ontario Unspecified.

Recreation/Pleasure

-- expenditure outside Ontario was assigned to main destination (USA, Other Province, Other Country).

-- if expenditure was also in Ontario, it was assigned on basis of number of person-nights spent in any of the 12 Ontario regions. If no overnight stops made in Ontario, it was assigned to a separate destination category "Ontario Unspecified".

Retail/Other Miscellaneous

- expenditure outside Ontario was assigned to main destination (USA, Other Province, Other Country).

- if expenditure was also in Ontario, it was assigned to a separate destination category "Ontario Unspecified".

Total amount accruing to "Ontario Unspecified" category was allocated to Travel Association Areas 1, 2, 6, 7, 9, 10, 11, 12, according to these rules:

- determined total same day expenditure (excluding pre-paid package expenditure) for each of Food/Beverage, Recreation/Pleasure, and Retail/Miscellaneous items, and on Ontario destination trips only, for each of the above given travel areas.

- determined percentage split of each expenditure item separately, amongst the given travel areas.

- allocated expenditures indicated for Food/Beverage, Recreation/Pleasure and Retail/Other Miscellaneous, according to percentage split amongst given travel areas.

E. WEIGHTING AND ESTIMATING PROCEDURES

1. The General Model

The objective is to provide trip and expenditure estimates for a defined period such as 1982 or a quarter in 1982. The simplest conceptual method is to calculate the average number of trips per household per month, multiply by the number of households in Ontario, and multiply by the months in the time period being estimated, i.e.:

Average H/H Trips/Month	x	Ont. H/H Population	x 12	=	Estimate of 1982 trips.

As

Average Trips/Month	=	Total Trips/Mo. Sample of H/H/'s	and	Ontario Pop. Sample H/H	=	Population Projection Factor,

the estimation procedure becomes:

Total Trips/H/H x Population Projection x 12 = 1982 Trips.

2. Special Factors

There are some special factors specific to the Ontario Travel Study that have to be taken into account when applying the estimating model.

i) Data were collected during 1982 with 12 monthly samples. The January to November samples reported for a two-month period and the December sample for December only. This means that there are data for each of the calendar months from two-monthly samples, except for January. To balance the data by month, the January data from the January sample were duplicated to create a "phantom" set of data for January, as if there had been a December 1981 sample reporting for the second month (January, 1982).

ii) After the creation of the phantom January sample, we had 24 separate months of data and 13 separate samples of households (12 monthly samples + phantom). To obtain a correct estimate of average trips per household per month requires equal numbers of monthly trip data and samples. Thus, as the data stand they would over-estimate trips by a factor of 24 ÷ 13.

To correct for this, the estimation model becomes for a year:

$$\text{Trips} \times \text{H/H Projection Factor} \times 12 \times \frac{13}{24}$$

$$= \text{Trips} \times \text{H/H Projection Factor} \times 6.5.$$

For estimates of other time periods, such as a quarter, the time period correction factor will change. This is illustrated below for a quarter.

For a typical quarter, the samples and data months will be as follows:

	Monthly Samples			
	M_0	M_1	M_2	M_3
First Data Month		X	X	X
Second Data Month	X	X	X	

For a quarter of months M_1, M_2 and M_3 we have 4 monthly samples and 6 sets of monthly data. This means that trips will be over-estimated by a factor of $6 \div 4$. Therefore, the estimation model becomes:

$$\text{Trips} \times \text{H/H Projection Factor} \times 3 \text{ (months)} \times \frac{4}{6}$$

$$= \text{Trips} \times \text{H/H Projection Factor} \times 2.$$

The data for the estimating model are obtained after a number of weighting procedures designed to equalize the samples by month and reflect the known demograhics of Ontario are applied. Each stage is described below.

3. Best Estimates Of Aggregate Trips

1. Equalizing Monthly Sample Sizes

The estimating model requires that each of the monthly samples is of equal size. Therefore, the first stage of sample adjustment was to equalize all monthly samples. This was done by standardizing across the year to a figure of 350 households per month.

For each interviewing month, a correction factor was calculated to bring the actual monthly sample size to a weighted sample size of 350. The actual sample sizes and adjustment factors are as follows:

Month	Sample	Weight	Month	Sample	Weight
Jan.	444	0.7883	July	355	0.9859
Feb.	382	0.9162	Aug.	322	1.0870
Mar.	345	1.0145	Sept.	351	0.9972
Apr.	381	0.9186	Oct.	350	1.0000
May	341	1.0264	Nov.	347	1.0086
June	350	1.0000	Dec.	344	1.0174

2. **Correlating For Regional Imbalance**

The initial sample was drawn proportionate to population with geographic regions of the province as a stratification in the EA file. The proportion of the sample in each region was influenced by two factors:

a) Differential response rates.

b) The sample was drawn on the basis of 1976 Census data but for estimating purposes, the 1981 Census data had become available.

The weights for regional correction are:

Region	Weight
Southwestern	0.78
Festival Country	1.05
Georgian Lakelands	0.79
Metro Toronto	1.42
Central Ontario	0.97
Ontario East	0.77
Ontario North	0.88

3. **Adjustment For Household Composition**

A special analysis was obtained from the 1981 Census showing, in total, and for each region, the household composition in terms of number of adults (15+) and number of children (under

15). The variation between regions was found to be small and, therefore, the sample data were adjusted by ratio weighting to a matrix of 9 cells as shown below, based on the total province. Weights are as follows:

	Number of Children			
Number of Adults:	0	1	2	3+
1	2.14	1.40		
2	1.01	0.84	0.78	0.83
3+	0.77	0.85	0.84	

4. Projection To Population

The target population is all households in Ontario. As the study was conducted throughout 1982, we have used our estimate of total households as of June 1982. This estimate was calculated using the 1981 Census data and other Statistics Canada information. We calculate that the number of households increased by 1.39 per cent between June 1981 and June 1982, giving an estimated household population of 3,010,000.

The expansion factor for the annual data is 0.66154.

F. SAMPLING ERROR

The accuracy of estimates derived from surveys is influenced by two main factors:

a) Sampling errors;

b) Methodological factors such as bias, missed reporting, non-response, etc.

If the second type are assumed to be small, the confidence levels for particular parameters in a survey can be calculated mathematically. One specific check on response bias was possible. At the recruitment interview, people were asked for overnight trips by people in the household taken in the previous month. Thus, their data could be examined for people who completed the diary and those that did not. The difference was small, with non-diary completers having slightly lower estimates.

1. Variance Formula

To estimate the sampling errors in the Ontario Travel Study, a variance formula has been derived. It takes into consideration the twelve independent monthly subsamples and the two-month reporting period employed in the survey design.

The variance formula is shown using the following notations:

Let the monthly subsamples be denoted by i = 0, 1, 2, ... 12, where i = 0 represents the phantom December sample.

Also let

Xi = total trips reported in the first reporting month for the i-th subsample after applying the first two stages of weighting*;

Yi = similar definition as above for the second reporting month;

VXi = variance of the trip figures in the household population for the first reporting month for the i-th sample;

VYi = similar definition as VXi for the second reporting month;

Ni = weighted sample size for the i-th subsample;

Ci = covariance of the reported values between the two months for the i-th subsample.

* Refer to section Estimation Procedure.

The annual estimate of total number of trips (T) is

$$T = \frac{3010}{4550} \times \frac{13}{24} \times 12 \times \left[\sum_{1}^{12} Xi + \sum_{0}^{11} Yi \right]$$

$$= 4.3 \times \left[\sum_{1}^{12} Xi + \sum_{0}^{11} Yi \right]$$

The sampling variance of T is

$$V(T) = (4.3)^2 \times \left[\sum_{1}^{12} VXiNi + \sum_{0}^{11} VYiNi + 2 \sum_{1}^{11} CiNi \right]$$

Estimates for quarterly totals can be computed by inserting the appropriate indices representing the subsamples for a specific quarter into the three summation signs. For example, estimate for the first quarter total (Ti) is

$$Ti = 4.3 \times \left[\sum_{1}^{3} Xi + \sum_{0}^{2} Yi \right]$$

The corresponding sampling variance is

$$V(Ti) = (4.3)^2 \times \left[\sum_{1}^{3} VXiNi + \sum_{0}^{2} VYiNi + 2 \sum_{1}^{2} CiNi \right]$$

2. Sampling Tolerances

Sampling errors for annual estimates and estimates of a typical quarter have been computed and are shown below. The formula used was:

$$\% \text{ confidence interval} = \pm \frac{2\sqrt{V(T)}}{T} \times 100\%$$

This provides a 95% confidence level, i.e., there is a 95% chance that the true figure will not fall outside the estimated value $\pm$ the

confidence level.

The tables can be used to approximate percentage errors for items not shown. For example, 9.67% of the annual total household trips were made to Non-Ontarian destinations. Although not computed its confidence interval can be approximated by dividing the percentage error of the overall total household trips by the square root of 0.0967. Example:

Confidence interval of total household trips = 4.1%

For Non-Ontario trips $4.1 \div \sqrt{0.0967} = 13.2\%$

CONFIDENCE INTERVALS: 95% CONFIDENCE LEVEL

	Household Trips		Person Trips	
	Annual	Quarter	Annual	Quarter

HOUSEHOLD QUESTIONNAIRE

TRIP DIARY

HOUSEHOLD QUESTIONNAIRE

LOCATION NUMBER: |_|_|_|_|_| HOUSEHOLD NUMBER: |_|_|

(ALL RESPONDENTS)

1. Have you been a resident here for more than four weeks?

YES 22-1

NO ..... 2 USE SPECIAL INSTRUCTIONS FOR QUESTION 3-a) AND 4-a)

2. Including yourself, how many people live in this household aged 15 years or more?

TOTAL HOUSEHOLD MEMBERS 15 YEARS OR MORE: |_|_| 23-24-

3-a) Have there been any trips taken by members of your household 15 and over which involved any overnight stays during the last month--that is, since this date last _____ (SPECIFY MONTH)?

-b) (IF YES) How many such trips have there been? A person travelling alone counts as one trip. If two or more household members travel together, this also counts as one trip.

NUMBER OF TRIPS: |_|_| 25-26-

(IF NO, RECORD "00" ABOVE AND GO TO QUESTION 5)

(ALL OVERNIGHT TRIP TAKERS)
I would now like to get some further information about these trips.

Beginning with the most recent trip ...

4-a) (HAND CARD) What was the distance from your home to the furthest destination? (RECORD BELOW)

-b) Was the main purpose of this trip, work or was it some other reason? (RECORD BELOW)

-c) (IF MAIN PURPOSE WORK) Was this trip part of a sales call or while working as a crew? (RECORD BELOW)

-d) Including yourself, how many persons 15 years and older, now living in this household, went along on that trip? (RECORD NUMBER BELOW)

(REPEAT QUESTIONS 4-a) TO -d) FOR UP TO 3 MOST RECENT TRIPS.)

"And for the overnight trip before that ...?"

		OVERNIGHT TRIPS		
		MOST RECENT	SECOND MOST RECENT	THIRD MOST RECENT
-a)	DISTANCE TO FURTHEST DESTINATION:			
	Less Than 25 MI./40 km	27-1	32-1	37-1
	25 To 49 MI./40 To 79 km	2	2	2
	50 To 99 MI./80 To 159 km	3	3	3
	100 MI./160 km And Over	4	4	4
-b)	MAIN PURPOSE OF TRIP:			
	Work ..... (GO TO -c)	28-1	33-1	38-1
	Other .... (GO TO -d)	2	2	2
-c)	TYPE OF WORK TRIP:			
	Yes--Sales/Crew	29-1	34-1	39-1
	No--Other	2	2	2
-d)	H/H MEMBERS 15 YRS. OR MORE IN PARTY:	30-31- |_|_|	35-36- |_|_|	40-41- |_|_|

5. To obtain an accurate measure of the trips that people living in Ontario make within and outside the province, we are asking households to keep a diary that we provide. In it you will record information on any longer trips that you or other people in this household may make. I will call back in two months' time to collect the diary and deal with any problems. Of course, we realize that some households may not take any trips during this time while others may take several trips. The information you provide will be very useful in planning good travel facilities for the people of Ontario.

(EXPLAIN LUCKY DRAW) As a small token of our appreciation for the important contribution people in Ontario will make to this project, we plan to run a lucky draw. Everyone who keeps a trip diary, whether any trips were taken or not, will have a chance to win a cash prize of $300.00.

The odds for this cash prize are excellent as only about 300 people will be entered in the draw. About three weeks after pick-up of the diary, the winner will be notified by telephone and asked to complete a simple skill testing question.

(ANSWER ANY QUERIES AS OUTLINED IN THE MANUAL.)

RESPONDENT AGREES
TO ACCEPT DIARY ..... 42- [1 GO TO DIARY INSTRUCTIONS]

RESPONDENT WILL NOT
AGREE ..... [2 SEE NEXT PAGE]

IF WILL NOT ACCEPT DIARY:

I am sorry that you are unable to complete the diary. We would like to know when we do our analyses whether the people who do accept the diary are typical of all the different households in Ontario. I hope you will answer a few more questions so that we can do that.

6-a) Are there any children under 15 years of age living at home?

YES 43-1

NO ..... 2 GO TO Q. 7

-b) How many are under 6 years of age? (RECORD BELOW)

-c) How many are 6 to 14 years of age? (RECORD BELOW)

TRIP DIARY

YOUR TRIP DIARY

This diary is for recording trips taken by any member of your household who is 15 years or older.

For this survey, a trip means anytime you or any member of your household travels to a place at least 25 mi/40 km (one way) from your permanent residence.

The following types of trips should not be included in this study even if they meet the minimum distance requirement.

- commuting to school or work
- travelling as an operator or crew member
- sales calls or deliveries
- moving to a new residence

Include in your household diary all trips that end during

_____ and _____, 1982

Include trips of this distance that involve overnight stays as well as those that do not. Make sure that you include trips of this distance to places such as a cottage, farm, chalet. Also, don't forget to include trips outside of the province as well as those within.

For the purpose of recording which household members, 15 years and over, went on a trip, please use the diary code indicated below.

DIARY CODE FOR HOUSEHOLD MEMBERS 15 YEARS AND OVER
